The Green Book - Current Economic Trends -

Overview

With continuing export growth, the Korean economy has been on a recovery track as domestic demand driven by private consumption is gaining pace. Private consumption is taking hold, with the progress in household debt restructuring and improving household incomes. However, investment is yet to see signs of recovery. Exports (*customs clearance basis*) stayed on a solid growth track, up 15.4 percent in the third quarter and 12.7 percent in the October-November period.

Proofs of economic recovery were also detected in production, with the growing manufacturing output and a continuing rebound in service activity. Employment, which had improved remarkably in the summer season, faltered in October with the growth of the newly employed stayed in the 200 thousand range following September. Prices remained low and stable with consumer prices in the 2 percent range and core inflation in the 1 percent range.

With the current recovery continuing, the Korean economy is projected to expand in the high 4 percent range in the fourth quarter, nearing its growth potential. However, a recovery in investment is still negligible and household incomes have not improved enough to support a solid rebound in private consumption due to continued difficulties the SMEs and self-employed small business owners are facing.

The government will push ahead with policy efforts in order to consolidate the recent economic recovery. For this, it will execute the revised supplementary budget as planned while closely monitoring domestic economic trends and external conditions.

1. Global economy

The global economy maintained solid growth despite oil price volatility. The US and China

stayed on the upward track while Japan and the eurozone posted moderate gains.

US

The US economy in the third quarter posted the highest growth of 4.3 percent (*preliminary*, *annualized*) since the first quarter of 2004, far surpassing the advance estimate of 3.8 percent (*annualized*) announced last month. The robust growth, despite high oil prices and hurricanes, relied on increases in consumption driven by rising sales of services and durable

goods, facility investment including industrial equipment investment, and government expenditures such as defense spending. Net exports' contribution to growth declined to -0.25 percentage point from 1.11 percentage points in the previous quarter due to a surge in imports to 2.1 percent from -0.3 percent in the previous quarter.

(Percentage change from previous quarter, annualized rate)

Q3 2005	GDP	Consumption	Investment	Net	export	Government
Q3 2005	333	Consumption	investinent	Export	Import	expenditure
Growth	4.3	4.2	5.8	0.8	2.1	3.2
Contribution to growth (%p)	4.3	2.97	0.96	-0.2	25	0.60

Meanwhile, the principal economic indicators in November showed signs of recovery, mainly driven by employment and industrial production.

New non-farm payroll employment

(m-o-m, thousand)

 $2,194 (2004) \rightarrow 546 (Q1 2005) \rightarrow 593 (Q2) \rightarrow$

 $663 \; \text{(Q3)} \rightarrow 44 \; \text{(Oct)} \rightarrow 215 \; \text{(Nov)}$

Industrial production (m-o-m, %)

4.2 (2004) \rightarrow 0.9 (Q1 2005) \rightarrow 0.3 (Q2) \rightarrow -1.5 (Sep) \rightarrow 0.9 (Oct)

Retail sales (m-o-m, %)

 $7.3~(2004) \rightarrow 1.5~(\text{Q1}~2005) \rightarrow 2.6~(\text{Q2}) \rightarrow$

 $0.3 \text{ (Sep)} \rightarrow -0.1 \text{ (Oct)}$

In the Minutes of the Federal Open Market Committee (FOMC) issued on November 22, the Committee participants expressed, for the first time since August 2004 when the federal funds rate rise started, a variety of perspectives about how the policy statement issued at the end of FOMC meetings might evolve over time. They agreed that several aspects of the statement language would have to be changed before long, particularly those related to the characterization of and outlook for policy.

China

The Chinese economy posted a 9.4 percent growth in the third quarter while retail sales, industrial output and fixed asset investment recorded solid gains in October.

Growth rate (y-o-y, %) 9.5 (2004) \rightarrow 9.4 (Q1 2005) \rightarrow 9.5 (Q2) \rightarrow 9.4 (Q3)

Retail sales (y-o-y, %) 13.3 (2004) → 13.7 (Q1 2005) → 12.6 (Q2) → 12.6 (Q3) → 12.8 (Oct)

Industrial production (y-o-y, %) 16.7 (2004) \rightarrow 16.2 (Q1 2005) \rightarrow 16.5 (Q2) \rightarrow 16.2 (Q3) \rightarrow 16.1 (Oct)

Fixed asset investment (accumulated, %) 27.6 (2004) \rightarrow 25.3 (Q1 2005) \rightarrow 27.1 (Q2) \rightarrow 28.5 (Q3) \rightarrow 27.6 (Oct)

The export growth rate in October rose slightly from September to 29.7 percent.

Exports (y-o-y, %) 35.4 (2004) → 34.9 (Q1 2005) → 30.9 (Q2) → 25.9 (Sep) → 29.7 (Oct)

The Chinese currency is fluctuating around 8.08 against the dollar. The G7 Finance Ministers' Meeting held in early December adopted a statement calling for additional flexibility in the yuan.

The US Treasury Department did not name China as a currency manipulator in its Semiannual Report to Congress on International Economic and Exchange Rate Policies in November.

Japan

Economic indicators suggested that economic recovery slowed its pace for two straight months to October. A worldwide downtrend in consumption caused by continuing higher oil prices dragged down various indicators in September. Also, retail sales and exports declined in October from the previous month.

Mining and manufacturing output (q-o-q, %)

 $5.5 (2004) \rightarrow 1.7 (Q1 \ 2005) \rightarrow -0.4 (Q2) \rightarrow -0.3 (Q3), 0.4 (Sep) \rightarrow 0.6 (Oct)$

Retail sales (q-o-q, %) -0.6 (2004) \rightarrow 0.0 (Q1 2005) \rightarrow 3.2 (Q2) \rightarrow 0.8 (Q3), 0.2 (Sep) \rightarrow -0.3 (Oct)

Exports (y-o-y, %) 12.1 (2004) \rightarrow 3.8 (Q1 2005) \rightarrow 4.3 (Q2) \rightarrow 7.4 (Q3), 8.8 (Sep) \rightarrow 8.0 (Oct)

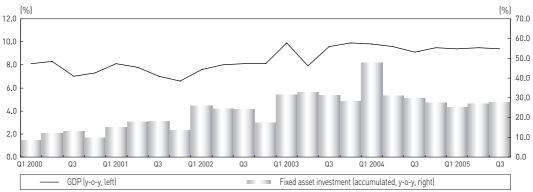

Eurozone

Signs of economic recovery in the eurozone were manifested in the major economic indicators in the third quarter. Industrial output maintained a strong momentum since June while retail sales rose 0.9 percent in August notwithstanding high oil prices.

Industrial output (m-o-m, %) 1.9 (2004) \rightarrow 0.0 (Q1 2005) \rightarrow 0.4 (Q2) \rightarrow 0.6 (Jul) \rightarrow 2.6 (Aug)

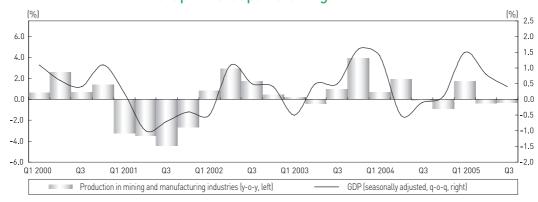

The European Central Bank lifted key interest rates by 25 basis points from the record low 2 percent to 2.25 percent on December 1.

Consumption-related indexes, albeit sluggish due to labor disputes in the automobile industry in September, resumed their expansion in October. Consumer goods sales rose 3.4 percent with a recovery in auto sales and gains in the sales of vehicle fuels and other non-durable goods.

Consumer spending is projected to consistently accelerate in November given favorable trends in preliminary consumption indicators including retail sales and credit card use, along with improved consumer confidence. Sales growth in both department and discount stores stayed on the gaining side, while credit card use expanded continuously.

Private consumption is forecast to stay on the recovery side given the progress in household debt restructuring and improving employment. However, meager improvement in income conditions such as slowing growth in Gross National Income (GNI) from aggravating terms of trade may serve as a constraining factor in the private consumption rebound.

< Income and employment related indexes >

3. Facility investment

Estimated facility investment index (*current value*) in October rebounded, albeit slightly, in three months with a rise in machinery investment and a smaller decrease in transportation equipment investment. Machinery investment rose 2.7 percent from

October last year with growing investments in electronic and electric goods and computers. Transportation equipment investment eased the pace of slide to improve from -11.2 percent in September to -2.3 percent in October.

(Percentage change from same period in previous year)

		2004		2005						
	Sep	Oct	Q4	Q1	Q2	Q3 ¹	Aug	Sep¹	Oct1

- Machinery	2.8	0.1	0.8	5.5	3.6	0.2	-5.4	0.0	2.7	
- Transportation equipment	-0.8	-0.4	2.6	1.8	-8.5	5.9	27.2	-11.2	-2.3	

^{1.} Preliminary 2. National accounts 3. Industrial activity

Facility investment-related indicators were sluggish in October. Domestic shipments of machinery fell 3.9 percent from the previous year with decreases in telecommunications and

machinery equipment. The Business Survey Index for facility investment compiled by the Bank of Korea stayed at a similar level to that of the previous month.

(Percentage change from same period in previous year)

				2005				
	Annual	Q2	Q3	Q4	Q1	Q2	Q3 ¹	Oct¹
Domestic machinery shipments	-1.3	-1.5	0.4	-0.9	-0.4	-1.4	2.2	-3.9
BSI ³ for facility investment	94	93	95	92	97	96	97	97 (Nov)

1. Preliminary 2. BSI [base 100] = (percentage of companies that gave a positive reply) - (percentage of companies that gave a negative reply) + 100

Of leading indicators, machinery imports showed positive signs, although domestic machinery orders edged up 0.9 percent, failing to overcome sluggishness since September.

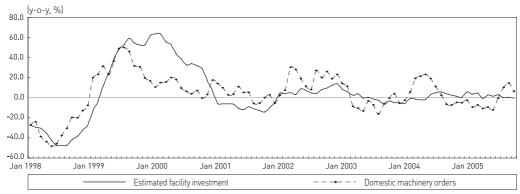

Facility investment is expected to recover gradually with rebounding domestic demand. Nevertheless, substantial improvement may not be likely for some time given the sluggish trend in related indicators such as domestic machinery orders.

(y-o-y, %) 100.0 80.0 60.0 40.0 20.0 0.0 -20.0 -40.0 -60.0 -80.0 L___ Q1_1995 Q1 1996 Q1 1997 Q1 1998 Q1 1999 Q1 2000 Q1 2001 Q1 2002 Q1 2003 Q1 2004 Q1 2005 -Machinery Facility investment Transportation equipment

Graph 3-3: Machinery imports

Source: Korea International Trade Association (KITA)

Construction completed (*current value*) in October grew mere 3.4 percent reflecting the recent sluggishness in the construction sector.

Construction project increased 4.6 percent from a year earlier, while civil engineering project was up 1.0 percent.

(Percentage change from same period in previous year)

		2004			2005					
	Sep	Oct	Q4	Q1	Q2	Q 3¹	Aug	Sep¹	Oct1	
Construction investment ²	-	-	-3.4	-2.9	1.7	0.4	-	-	-	
Construction completed ³	19.7	9.0	4.4	2.8	10.3	4.4	5.0	3.3	3.4	
- Construction project	18.9	12.5	8.3	1.1	10.5	5.4	4.8	7.2	4.6	
- Civil engineering project	21.3	2.7	-2.0	6.3	10.3	2.4	5.4	-3.6	1.0	

^{1.} Preliminary

Overall, the performance of construction related indicators was weak in October.

Construction orders, a leading indicator, were down 34.8 percent from the same month last year reversing course to negative growth in eight months. A relative high base set in October last year also affected the negative growth.

Housing construction went down 46.9 percent to post a five-month losing streak.

Building construction permits edged up 0.5 percent in October. However, most of the growth came from the non-housing construction such as educational and social building construction, which is not directly related with growth in the construction sector, while housing construction shrank 15 percent.

(Percentage change from same period in previous year)

		2004		2005			
	Q2	Q3	Q4	Q1	Q2	Q3	Oct
Construction orders	-23.8	-20.8	28.8	24.8	40.5	16.7	-34.8
Housing construction	-57.6	6.5	23.4	23.0	25.8	-26.6	-46.9
Building construction permits	-34.0	-15.0	14.7	0.6	-0.6	-6.0	0.5

Although tracking changes in various indicators seems necessary, the construction business will likely remain sluggish for the time being given trends in leading indicators.

Exports in November hit a record high of US\$26.07 billion posting a double-digit boost of 13.0 percent despite unfavorable external conditions such as high oil prices and a high

base set in November last year (*US\$23.08 billion*). Average daily exports recorded US\$1.09 billion.

				2005			
	Jun	Jul	Aug	Sep	Oct	Nov	Jan-Nov
Exports (US\$ billion)	23.72	23.24	23.35	24.53	25.50	26.07	259.22
(y-o-y, %)	(9.5)	(10.6)	(17.9)	(17.8)	(12.5)	(13.0)	(12.4)
Average daily exports (US\$ billion)	1.03	0.99	0.97	1.09	1.13	1.09	1.03

Estimated exports of petrochemicals (*up 62.4 percent*), automobiles (*up 6.7 percent*), general machinery (*up 38.0 percent*) and semiconductors (*up 6.7 percent*) showed strong growth, while computers (*down 8.4 percent*) and home appliances (*down 8.2 percent*) decreased.

Imports in November also hit a record high of US\$23.94 billion, surging 17.9 percent. Import

growth overtook export growth, and average daily imports stayed in the US\$1 billion range for three consecutive months.

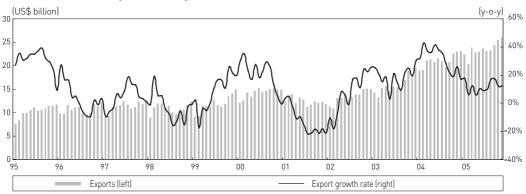

The imports of raw materials sustained a double-digit growth with a 22.2 percent while imports of consumer and capital goods increased moderately recording gains of 8.2 percent and 5.5 percent respectively.

				2005			
	Jun	Jul	Aug	Sep	Oct	Nov	Jan-Nov
Imports (US\$ billion)	21.26	21.47	21.94	22.65	22.71	23.94	236.87

Industrial production accelerated in October despite fewer working days compared to the same month last year on healthy growth in semiconductor output and operation normalization in the automobile industry after the industrial action in September.

However, the increase in output, excluding semiconductors and audiovisual & telecommunications equipment, stood at a mere 0.3 percent, indicating that the economic recovery is not well balanced across all sectors.

Industrial production (y-o-y, %) 4.0 (Q2 2005) → 6.9 (Q3), 6.4 (Aug) → 7.3 (Sep) → 8.0 (Oct)

Industrial production except semiconductors and audiovisual & telecommunications equipment (y-o-y, %)

2.0 (Q2 2005) \rightarrow 1.3 (Q3), 0.7 (Aug) \rightarrow 0.2 (Sep) \rightarrow 0.3 (Oct)

Output in semiconductors, audiovisual & telecommunications equipment and automobiles led the increase in industrial production climbing 36.7 percent, 12.0 percent and 6.1 percent respectively from a year earlier, whereas textiles and office accounting equipment including computers decreased 12.4 percent and 11.1 percent respectively.

The average manufacturing operation ratio stood at 79.3 percent in October, up 0.3 percentage point from the previous month. Total inventory growth remained at a similar level to that of the previous month.

Employment growth in October expanded from September. The number of workers on the payroll was up 284,000 in October after increasing 239,000 in the previous month, with monthly average growth being 299,000 in the first ten months of this year.

Employment in the manufacturing sector continued to fall (down 81,000) while that in the construction sector had decreased slightly (down 11,000) for two consecutive months affected by fiscal frontloading in the first half. Hiring in the agricultural, forestry and fisheries sector, which had a marked rise during the May-August period with fair weather conditions, returned to a long-term downward trend (down 28,000) in October after having reversed course to a decline in September.

The service sector increased employment by 404,000 fueled by the recovery in overall domestic demand. The sector played a leading role in job creation with employment in the overall sector continuing its healthy growth apart from wholesale & retail sales (*down 56,000*). In particular, hotels & restaurants, sensitive to trends in the domestic economy, reversed course to an increase (*up 28,000*) in October as seen in August.

The unemployment rate stood at 3.6 percent, up 0.2 percentage point from a year earlier, as the economically active population made a relatively big gain (*up 345,000*) in October. Part-time workers recruited for the 'Population and Housing Census' were classified as unemployed in case they did not get a job until the end of the census period (Nov 1-15), which raised the unemployment rate by around 0.1 percentage point.

Employment growth slowed down since September compared to the surge in the May-August period. However, the average number of newly employed is expected to reach around 300,000 this year as employment growth is likely to stay at current levels in November and December given the rebounding domestic demand.

9.1 Stock market

The KOSPI gained 12.0 percent in November from the end of October to wrap up the month at a record high of 1,297.4 points. The KOSDAQ too was up 21.3 percent to 712.4 points steadily increasing throughout the month. This was attributed to a bullish run in global markets including the US on expectations of better performances in the IT industry. Investor sentiment improved on the back of expectations

on continued recovery in domestic demand and funds continued to flow into equity funds, which also boosted the stock market.

Net buying by foreign investors and institutional investors amounted to 41 billion won and 1,545.1 billion won respectively, while net selling by individual investors was 1,826.5 billion won.

^{1.} Change from the end of previous year

9.2 Exchange rate

After increasing slightly in early November, the won/dollar exchange rate declined since mid-November.

The exchange rate reached the 1,049 won range on November 7, as dollar supply subdued with an interest rate hike by the US Federal Reserve Board and with the closing of

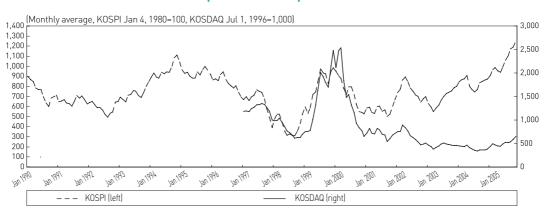

dollar payments from overseas for the purchase of Hynix shares.

The won/dollar exchange rate, however, fell after mid-November to close the month at 1,033.5 won as dollar supply exceeded demand with increased selling of the currency by domestic exporters.

9.4 Money supply & money market

M3 growth in October is estimated to have stayed at the mid-6 percent range, a similar level to that of the previous month, as money supply from overseas decreased despite a healthy credit supply from the private sector.

M1 growth is estimated to have plunged to mid-9 percent in October as money moved into time deposits and equity funds.

(Percentage change from same period in previous year, average)

M3	6.3	6.1	5.8	5.4	5.4	5.6	6.0	6.5	6.5	6.41	Mid 6		

1. Preliminary

Bank deposits decreased 3.2 trillion won in October, with declining money flows into money market deposit account (MMDA), which saw a substantial increase in the previous month. Less money into MMDA occurred as specially offered deposits with higher deposit rates came due and companies paid the VAT. However, time deposits increased

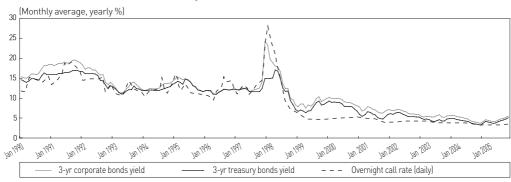

further with promotional efforts and rising deposit rates.

Asset management company (AMC) receipts expanded slightly as money outflows from money market funds (MMF) eased and a decrease in money inflows into equity funds slowed.

1. Preliminary

The service account deficit narrowed US\$0.51 billion to US\$0.60 billion due to seasonal factors in October. However, the deficit amounted to US\$11.19 billion in the first ten months of 2005, already exceeding US\$6.9 billion recorded in 2004.

The travel account deficit widened 59.1 percent to US\$7.88 billion during the January-October period, higher than the US\$4.96 billion recorded

in 2004, as travel payments increased 26.8 percent and travel revenue declined 6.6 percent.

The business service account deficit expanded 31.4 percent to US\$5.17 billion from January to October this year as payments increased 19.1 percent to US\$12.66 billion while revenue climbed mere 11.9 percent.

(Jan-Oct 2005 accumulated, US\$ million)

	General travel	Education & training	Total
Travel revenue	4,460 (-6.5)	8 (-46.6)	4,470 (-6.6)
Travel payment	9,590 (23.7)	2,760 (39.0)	12,350 (26.8)
Travel balance	-5,130 (71.9)	-2,750 (39.7)	-7,880 (59.1)

 $^{{\}it * The figures in parentheses represent a percentage change from the same period in the previous year.}\\$

The income account surplus amounted to US\$300 million, up US\$160 million from the previous month as overseas interest payments decreased.

The capital account recorded a US\$2.28 billion deficit in October due to a net outflow of foreign portfolio investment.

11.1 Prices

Consumer prices in November rose 2.4 percent from a year earlier and 2.8 percent compared to monthly average prices in the first 11 months of last year, stabilizing below the early-year forecast of low 3 percent.

Oil product prices remained high, rising 8.4 percent from a year earlier. However, they declined 2.0 percent from the previous month as global oil prices recently stabilized.

< Consumer price inflation >

	2004			2005		
	Nov	Jul	Aug	Sep	Oct	Nov
Month-on-Month (%)	-0.6	0.4	0.3	0.7	-0.2	-0.7
Year-on-Year (%)	3.3	2.5	2.0	2.7	2.5	2.4

< Consumer price inflation in major sectors >

(Percentage change from same period in previous year)

	Total	Agricultural, livestock & fisheries products	Industrial products	Oil products	Public utility	Housing rents	Personal services
Nov 2005	2.4	-0.5	3.9	8.4	2.6	-0.3	3.1

Nov average 2000-2004	3.2	5.1	2.1	4.4	3.5	3.8	3.6

Year-on-year core inflation, excluding agricultural and energy products, stood at 1.9 percent due to low aggregate demand pressure and grain price stabilization. Year-on-year

consumer price inflation for basic necessities, a barometer of perceived consumer prices, gained 3.3 percent from a year earlier.

(Percentage change from same period in previous year)

	2004			2	005		
	Nov	Jul	Aug	Sep	Oct	Nov	Jan-Nov
Core inflation	3.1	2.1	1.9	1.9	1.8	1.9	2.4
Consumer prices for basic necessities	5.0	3.9	2.8	3.8	3.4	3.3	4.1

Average consumer price inflation in 2005 is likely to stay in the upper 2 percent range, the most stable record since 2002.

Year-on-year consumer price inflation in December will probably remain in the range of

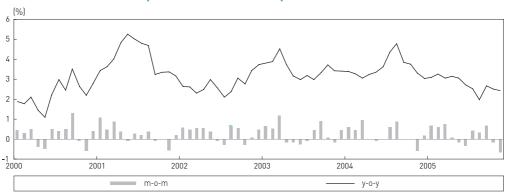

stable 2 percent, despite some inflationary factors such as an increase in taxi fares and water supply & drainage service charges in several cities.

11.2. International oil and commodity prices

International oil prices saw a downward stabilization in November affected by mild winter weather in the US and a recovery from oil production losses in the US Gulf of Mexico.

However, oil prices may rise to some extent, in the event temperatures in the US Northeast drop in December when the winter season begins in earnest.

(US\$/barrel, average)

Apartment sales prices still remain higher than levels seen in September 2003 when the Oct 29 policy, a real estate policy intending to stabilize the housing market, was not yet in effect. However, apartment rental prices were similar to or lower than the levels in September 2003.

Apartment sales have moderated since a government plan to review the real estate policy was announced on June 17.

Land prices showed bigger gains in some parts of the nation such as Yeongi-gun as compensation was anticipated soon for residents in some areas selected to establish a multi-functional administrative city and several provincial cities were chosen as company towns. The Cheonggye stream restoration also boosted land price in some related areas.

The top five areas with the steepest rise in land prices include Yeongi-gun, South Chungcheong

province (3.29 percent), Muju-gun, North Jeolla province (1.05 percent), Seongdong-gu, Seoul (0.93 percent), Dongjak-gu, Seoul (0.90 percent) and Seogwipo-si, Jeju province (0.85 percent).

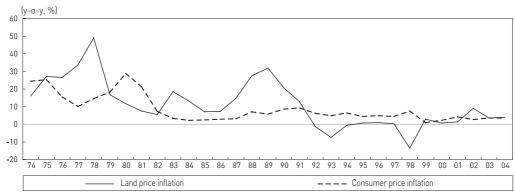

Land transactions decreased led by major areas with the impact of the government's tighter property measures announced on August 31, 2005.

I. Proliferation of international tax avoidance and global movement against tax avoidance

The rapid development of information and communication technology (ICT), the liberalization of cross-border capital movement, the spread of a new breed of financial instruments such as derivatives and the increasing role of investment funds in the international financial market have led to explosive growth and a variety of cross-border transactions of intangible properties, services and financial products.

This, however, has also contributed to the expansion of international tax avoidance in size as well as the sophistication of the way that such tax avoidances are committed. To make matters worse, tax haven jurisdictions and preferential tax regimes of some countries have played a catalytic role for the development of international tax avoidance practices.

A report released by the Brookings Institution in September 2005 found that roughly US\$1 trillion in "dirty money" – money that is illegally earned, transferred, or used – is channeled through tax havens each year. Moreover, in March 2005, the Tax Justice Network (TJN)

estimated that there is approximately US\$11.5 trillion in personal wealth being stowed away in roughly 72 international tax havens.

Contribution of tax havens to the increase of tax avoidance practices is also backed by the latest US federal data. According to the data, the profits of foreign subsidiaries of US multinational corporations in 18 tax havens soared from US\$88 billion in 1999 to US\$149 billion in 2002.

Given that total profits of US multinationals' foreign subsidiaries around the world stood at US\$255 billion in 2002, and that those 18 tax havens were home to 58 percent of the foreign profits of those multinationals, subsidiaries of US multinationals generated profits mainly in tax havens rather than in the locations in which they conducted most of their business.

This reflects an increasing number of US multinationals are attempting to avoid their taxes through tax shelters rather than they carry on substantive investment activities in those low-tax countries.

II. Amendment to domestic tax laws

A. Codification of the substance-over-form principle with respect to international transactions

(1) Overview

In September 2005, the Korean government submitted to the National Assembly the proposed bill for revising the current Law for Coordination of International Tax Affairs (LCITA) in order to specify in the law that where domestic or foreign investors make investment in Korea through a paper company (conduit company) established in tax haven jurisdiction to merely claim tax treaty benefits, income from such investment in Korea may be subject to Korean tax in accordance with the substance-overform principle.

(2) Issue of conflict with tax treaties

Where a transaction is entered into between Korean residents and a substantive owner (or beneficial owner) of the income from the transaction is not the same as a recipient of the income, the income should be regarded as belonging to the substantive owner (or beneficial owner) rather than the recipient and taxation shall be made accordingly pursuant to the substance-over-form principle as defined in Article 14 of the existing Basic Law for National Taxes and Article 3 of the existing Corporation Tax Law.

When it comes to the application of such general provision of domestic tax laws to bilateral tax treaties, however, there are two conflicting views in the academic circle. One is that in order to restrict the application of tax treaties, a special provision with respect to limitation on treaty benefits should be inserted into treaties. The other view supported by the majority is that a general provision stipulated in domestic tax laws can be extended to tax treaties.

The Commentaries on the OECD Model Tax Convention backs the second view by suggesting some countermeasures against tax treaty abuse schemes on the premise that specifying the substance-over-form principle in domestic tax laws and applying it to tax treaties are legally permissible. In this sense, it can be said that the argument made by some scholars that the substance-over-form provision or anti-abuse provision is valid only if it is included in tax treaties clearly runs counter to the OECD's position.

In addition to the Commentaries on the OECD Model Tax Convention, examples of such developed countries as the US, Germany and Canada also support the Korean government's move to include those rules mentioned above in the domestic tax laws.

(3) Nature of the substance-over-form rule to be stipulated in Korean domestic tax laws

It is generally believed in the academic circle that the substance-over-form rule should apply irrespective of its codification in domestic laws or not. The Supreme Court of Korea also has rendered a decision on cases with respect to the determination of a substantive owner of income based on the substance-over-form rule before any provision stating the rule was stipulated in domestic tax laws. Given this, the provisions stating the rule in the Basic Law for National Taxes and the Corporation Tax Law can be seen simply as declaratory and confirmatory provisions.

This also holds true for the proposed codification of the substance-over-form rule in the Law for Coordination of International Tax Affairs (LCITA). In 1993, the Supreme Court of Korea rendered a decision denying the benefits of the Korea-Netherlands Tax Treaty in accordance with the substance-over-form principle.

Also, the National Tax Tribunal held in 2003 that it was justifiable to apply the substance-over-form principle for the imposition of tax by the Korean tax authorities in respect of interest paid by a bogus offshore fund established in Labuan, Malaysia on money borrowed in the name of the fund.

In the US as well, a theory has been established in court cases that where

a company is set up for non-business purpose and does not perform substantial business activities, the company's legal personality should be disregarded.

Given this, it seems to be widely accepted that the substance-over-form principle can be applied to tax treaties. In this sense, it can be safely said that even if a provision on the rule is inserted in the LCITA as proposed this year, it will be only a declaratory and confirmatory provision.

Such declaratory and confirmatory nature of the proposed provision has significant implications with respect to its effective date. Since the proposed provision, if enacted, should be viewed as declaratory and confirmatory provision, it would be right to regard the provision as not affecting legal effect of international transactions made before the provision comes into effect.

In other words, taxation on such transactions will be determined in accordance with the previous court decisions and extended interpretation of relevant provisions on the substance-over-form principle in the Basic Law for National Taxes and the Corporation Tax Law, while taxation on those transactions to be made after the new provision in the LCITA takes into effect will be determined pursuant to the substance-over-form principle based on that particular provision.

B. New withholding tax rule with regard to passive income paid to residents in tax shelters

(1) Overview

Recognizing such negative impact on the effective operation of Korea's international tax system of a few of the country's treaty partners offering no or nominal tax burden to foreign investment funds, the Korean government plans to introduce a new withholding tax rule to cover countries or areas that are deemed to be tax shelters so that chances of treaty shopping attempts can be significantly reduced.

The gist of the new rule is that income from investment in Korea derived by a non-resident or a foreign company located in some specific countries or jurisdictions designated by the Minister of Finance and Economy should be first withheld by a withholding agency based on tax rates provided in domestic tax laws.

If the non-resident or the foreign company is able to substantiate to the relevant tax office within 3 years that it qualifies for the treaty benefits as the substantive owner of the income concerned, any difference between the amount withheld at the domestic tax rate and one based on the applicable treaty should be refunded within 6 months.

According to the rule, in case the taxpayer concerned wishes to apply a reduced rate or tax exemption provided

for under tax treaties from the beginning, he or she should request the Commissioner of the National Tax Service (NTS) to give an advance approval by following the procedure to be provided in the relevant Presidential Decrees.

(2) Issue of conflict with tax treaties

Some may claim that the new withholding tax rule conflicts with relevant provisions of tax treaty on the ground that a tax rate under domestic tax law is applied first without regard to tax treaties under the new system.

According to the Commentaries on the OECD Model Tax Convention, however, a Contracting State is free to use a procedure provided in its domestic law in applying non-taxation, tax exemption or a reduced tax rate under a tax treaty. Therefore, the newly proposed withholding tax rule should not be viewed as conflicting with tax treaties.

In fact, withholding tax regimes similar to that to be introduced in Korea in July next year have already been adopted in some other countries such as the US, Germany, Switzerland and Canada.

(3) Supplementary rules to be further developed

The proposed amendments to the Income Tax Law and the Corporation Tax Law with regard to the new withholding tax system were submitted to the National Assembly in September this year. In order to ensure smooth implementation of the

system, further preparatory work is underway for the development of detailed rules to be specified in relevant enforcement decrees.

For the purpose of securing enough time necessary to ensure the smooth

implementation of the new withholding tax system by the NTS, the new system is scheduled to come into effect on July 1, 2006.

III. Conclusion

In response to concerns among foreign investors over the proposed amendments and recognizing that foreign investment plays such a significant part in Korea's economic development, the Korean government will spare no effort to make sure that the new tax regime is operated in a way that does not hinder foreign investments in Korea.

Economic News Briefing

International Community Upbeat about Korean Economy Next Year

An economic recovery is certainly underway in Korea led by reviving private consumption and accelerating exports. The encouraging trend will continue into next year, with the economy growing 3.8 percent this year and 5 percent next year, said the IMF whose mission visited Seoul on November 9-17.

The Organization for Economic Cooperation and Development (OECD), too, raised next year's growth forecast for Korea to 5.1 percent from 4.9 percent projected in October in its "OECD Economic Outlook" released on November 29. It also forecast that Korea's growth rate would be 3.9 percent for this year compared to a previous projection of 3.7 percent and 5.2 percent for 2007.

Private consumption would continue to recover by increasing 4.1 percent next year, and exports maintaining robust momentum, up 13.1 percent in 2006 driven by the recovering IT sector, said OECD in its latest report.

However, the upbeat outlook could be jeopardized by a possible increase in

household savings rates and the still large number of delinquent borrowers that may limit consumption spending, it pointed out. OECD called on Korea to continue its reform to address the structural causes of weak domestic demand.

Both IMF and OECD concurred in that the current recovery needs further support from accommodating macroeconomic policy and structural reform in the face of still weak investment and delinquent borrowers.

Meanwhile, the International Herald Tribune and the Asian Wall Street Journal, quoting economists at the Conference Board, the New York-based think-tank, and JP Morgan Chase, reported on December 2 that the Korean economy has entered into a sustainable recovery nearing a complete restoration of its domestic demand.

FSC/FSS Plans to Improve Prompt Disclosure Requirements

The Financial Supervisory Commission (FSC) and Financial Supervisory Service (FSS) plan to make changes to prompt disclosure requirements to reduce the

disclosure burden of publicly held companies.

The changes will be implemented from early next year based on the draft proposals put forth by the Korea Securities Research Institute on June 17, 2005.

As the FSC/FSS increased prompt disclosure items in an effort to enhance management transparency after the Asian financial crisis, Stock Market-listed companies are now subject to 231 prompt disclosure items, while KOSDAQ-listed companies are subject to 227 items.

In order to relieve the burden of filing many prompt disclosures, the FSC/FSS will eliminate disclosure items that are deemed to be of little significance to investors.

For certain disclosure items, companies will be subject to two triggering ratios; currently they are subject to four. Certain transactions such as debt guarantees will also be subject to mandatory disclosure if the amount of each transaction exceeds a threshold amount, whereas currently the disclosure obligation is triggered on an accumulated basis.

From next year, publicly traded companies will be given more flexibility and latitude

in deciding what information they will give to investors, as disclosure of certain items that deal with positive corporate information or hold relatively little significance to investors will be left to the discretion of companies.

Companies will also no longer be delisted from stock markets as a result of too many disclosure violations. However, to ensure companies' compliance with disclosure rules, the companies that are in strict compliance will see a reduction in their penalty points.

Finally, unless deemed necessary for the public interest, self-regulatory organizations will assume the primary responsibility for regulating and enforcing disclosures.

BIS Capital Adequacy Ratio Highest Ever

The average BIS capital adequacy ratio of domestic banks hit a new record high of 12.83 percent, up 0.75 percentage point from 12.08 percent at end 2004 and up 1.05 percentage points from a year earlier. The ratio rose for 15 banks and fell for 4 banks from end last year.

Domestic banks' risk-weighted assets rose mere 8.3 percent since the beginning of this year, which was easily offset by a 15 percent (12.9 trillion won) gain in banks' equity capital. The equity capital gain is attributable to 10.5 trillion won worth net income of domestic banks and 500 billion won worth government contributions to the Export-Import Bank of Korea.

For example, in the case of collaterals which require a
publicly held company to file a disclosure when they
amount to a certain percent of its shareholders' equity,
four triggering ratios apply depending on its size and
whether it is a Stock Market-listed or KOSDAQ-listed
company.

Domestic banks' tier-1 capital surged by 14.2 trillion won or 25.0 percent, while debt type tier-2 capital declined 1.3 trillion won or 4.4 percent as of the end of September to improve the quality of capital.

Mutual Savings Banks' Net Income Surges in Q1 of FY2005

Mutual savings banks (MSBs) posted a combined net income of 175.2 billion won for the first quarter of Fiscal Year 2005 that ended September 30, more than a twofold increase from the quarterly average of 75.3 billion won in the previous year. The significant increase in net income was mainly due to a surge in investment income from strong stock prices and a rise in income from fees and charges.

Excluding non-operating income from the disposition of MSBs' office buildings (23.1 billion won) and government funds covering the losses from mergers of distressed banks (28.7 billion won), net income amounted to 123.4 billion won, up 63.9 percent from the same period a year ago.

The MSBs' delinquency ratio for the first quarter of Fiscal Year 2005 stood at 21.3 percent, down from 22.2 percent the same period a year ago. The ratio of MSB loans classified as substandard or below (SBL) rose slightly to 13.1 percent from 11.7 percent a year ago, reflecting the recent mergers with financially distressed MSBs by Busan Solomon MSB and Yegaram MSB. However, the SBL ratio excluding these two MSBs amounted to 11.8 percent.

< Combined net income of mutual savings banks >

(Billion won, FY)

Busan APEC Forum Concludes amid Upgrading Korea's Status

The 13th Asia-Pacific Economic Cooperation (APEC) meeting was held on November 18-19, 2005 at Nurimaru APEC House in Busan.

Korea as host of the regional body was rated as having etched its image of 'advanced trading country' in the minds of foreign business people through its role in the CEO Summit, APEC Business Advisory Council, and other business-related functions.

The APEC event has also helped strengthen the image of Korea as an IT

powerhouse. "Paperless e-conference" was introduced to the Summit. Journalists at the International Media Center experienced PDA and DMB phones first hand as they worked.

Also, Korea is forecast to reap US\$600 million in FDI from hosting the APEC meetings. According to the Ministry of Commerce, Industry and Energy (MOCIE), memorandums of understanding (MOUs) will be agreed on investment worth US\$520 million by foreign corporations during the APEC Investor Opportunities 2005. In addition, Busan and the Incheon FEZ succeeded in attracting investments worth US\$130 million and US\$6 million respectively from foreign investors.

Korea Ranks First in Digital Opportunity Index

Korea ranked first in the world's digital opportunity index (DOI), the International

Telecommunication Union (ITU) announced at the World Summit on the Information Society (WSIS) held in Tunis, Tunisia on November 18. Hong Kong and Japan followed Korea while Denmark, Sweden and Canada ranked fourth, fifth and sixth, respectively, on the index.

The DOI, an official figure made public by the ITU, is a composite index developed to measure the magnitude of the digital divide and to follow up the implementation of the objectives, goals and targets of WSIS plans.

The DOI is based on data verified by the Organization for Economic Cooperation and Development (OECD), the United Nations Conference on Trade and Development (UNCTAD) and UNESCO.
